

Residual Networks (Part 4)

Dr. Alireza Aghamohammadi

ResNet Block

- ▶ A typical ResNet block includes the following sequence: batch normalization, an activation function, and a 3×3 convolutional layer.
- ▶ This sequence is then repeated¹.

Bottleneck ResNet Block

- ▶ A bottleneck ResNet block integrates information over a 3×3 region using fewer parameters. It consists of three convolutions²:
 - ▶ The first 1×1 convolution reduces the number of channels.
 - ▶ The second 3×3 convolution processes the smaller representation.
 - ▶ The final 1×1 convolution increases the number of channels to match the input for addition.
